

Brightly Confirm™

# Transform the way you manage street light assets

Do you want to enhance your operational efficiency in the field while eliminating the need for multiple systems and site visits?

Brightly Confirm is an end-to-end asset management system that gives you the full ability to manage multiple street light assets through a single platform, giving you a central source of truth for all street lighting-related data. Manage, operate, and maintain your street lighting accurately, making sure field workers are effectively utilised for inspections and fixes in different locations. Streamline your processes to simplify how you manage street light workloads and enhance productivity, allowing you to keep up with resident demands and provide the best service possible.

## Key reasons to consider Brightly Confirm for your street light assets:

Confirm can be **integrated** into CMS system solutions.

Confirm is easy to use with a **map-based view** and access the mobile application for ease of work out in the field.

Inspection frequencies with **defined inspection routes** and the ability to configure night scout inspections.

Easy-to-manage replacement programmes and **scheduled maintenance** such as bulk lamp cleans and changes.

**Out of the box reporting** on Elexon BCSP520 Energy consumption.

**GN22 compliant** for all Structural and Electrical Testing.
