Brightly **TheWorxHub** Compliance Pro

Uplevel your work orders to stay survey-ready

In many hospitals' CMMS today, there is still a surprising lack of integration with, and visibility to, critical maintenance and compliance-related activities that tie back into the system. Key permits, such as life safety measures and infection control, are still managed through online portals, spreadsheets, or even worse – paper – forcing technicians to eat up precious time chasing approvals and changes. In addition, the failure to tie these permits back to compliance codes and maintenance-related activities puts undue stress and administrative burden onto the team as they prepare the survey-readiness Compliance Binder, increasing the likelihood for mistakes and risking hospital accreditation.

Designed to uplevel hospital work orders, Compliance Pro from TheWorxHub lightens the burdens surrounding survey readiness and improves efficiency by digitizing critical, compliance-related activities – such as Permitting and Compliance Binders – and integrating them directly into the work order. As part of TheWorxHub, Compliance Pro is a facility team's best tool to minimize costs, simplify compliance, and reduce risk through smarter asset and faciliites management.

Compliance Pro enables your technicians to reduce the chaos of compliance and be confident in their survey readiness.

Protect accreditation from turnover

Centralize and standardize all critical compliance documentation – current and historical – into one electronic location, protecting the hospital from outdated or missing information.

Get "smart documentation" protection

Compliance Pro can create "smart documentation", such as dashboards, reports, and insights, to help teams visualize potentially critically missing audit documentation early – allowing them to focus on resolving deficiencies before it's too late.

Reduce inspection risks

Reduce the number of systems and amount of paper by creating one organizational compliance tool for the team, helping technicians prioritize critical repairs and maintenance.

Improve maintenance response times

Easily create permits directly into a work order and monitor its approval progress in the CMMS, enabling technicians to expedite permit approval and allowing them to shift repair focus.

Streamline permitting with built-in features

Unlike other healthcare CMMS solutions today, Compliance Pro from TheWorxHub is the only solution to offer a permitting suite – including ICRA, PCRA, and ILSM – that directly integrates into a work order.

Minimize unplanned downtime

Combine familiar permitting forms, easy-to-use UI, and minimal inputs needed for a work order with best-in-class implementation and services to ensure your teams will be up and running quickly, with little to no downtime.
